QUALITY, PERFORMANCE AND SAFETY**

**FEED AND CARE RECOMMENDATIONS:
SENIOR HORSE**

As horses reach their late teens and early 20's a variety of problems may begin to occur.

These include teeth loss and gum ulcers, respiratory problems, decreased digestive efficiency, decreased digestive tract motility, a compromised immune system and poor hair coat. Diet plays an important role in managing these health risks and **SENIOR DELIGHT** and **CARBORAIDER SENIOR** are formulated to address these issues.

SENIOR DELIGHT: Features of this unique Complete Feed (no hay or other feeds required) are:

The alfalfa meal-molasses based crumbles in **SENIOR DELIGHT** are very palatable and very easy to chew for horses with teeth and gum problems. The high level of molasses also helps prevent respiratory problems by reducing dust. The high quality nutrient sources in **SENIOR DELIGHT** are easily absorbed, overcoming the problem of decreased digestive efficiency. To help maintain digestive tract motility, wheat bran and rice bran provide digestible fiber for bulk. Pre and Probiotics reduce lactic acid buildup and helps maintain a healthy balance of intestinal microflora. Because an older horse's immune system may have difficulty coping with stress, **SENIOR DELIGHT** contains Vitamin E and C at levels much higher than National Research Council requirements. Recent research has indicated that Vitamin E can enhance the immune response. Whole plant yucca (a natural anti-inflammatory) and glucosamine provide joint support for your aging companion. Finally, **SENIOR DELIGHT** contains plenty of linoleic acid, an essential fatty acid associated with improved skin condition and hair coat. So, baby your faithful old friend, but do it with the solid nutrition contained in **SENIOR DELIGHT**. For horses recuperating from injury or illness, **SENIOR DELIGHT** makes an excellent "hospital" diet.

CARBORAIDER SENIOR:

If your Senior, requires a low sugar/starch diet then **CARBORAIDER SENIOR** is the right choice. This complete feed contains no alfalfa or molasses, has less than 3% starch and 10% sugars and retains all of the benefits of our **SENIOR DELIGHT**. Soybean and beet pulp provide a fiber rich base that is fortified with chelated minerals for maintenance of bone and cartilage and lecithin which enhances nutrition absorption and skin/coat condition and is known to reduce the impact of ulcers.
